

Project data where it belongs — with you.

You keep your **own project record** and share from it what you choose. Every party signs the commitments they make for the others — so everyone holds the paper trail they need.

IN THE BROWSER · IN MINUTES · WITH YOU

Ready in minutes

- Open the browser — and you keep your **own project record**.
- The browser you already have is all it takes.
- Carry on with **Outlook, your file server and the programs you already use**.

Yours to keep

- Your data sits in your browser, on your machine, under your control.
- Your record stays yours — **beyond the end of the project, and when a licence lapses**.
- You release deliberately: exactly the state, exactly to the recipient.

How the paper trail forms

- 1 Everyone keeps their own**
Each office, authority and specialist planner holds their own project record.
- 2 Everyone signs what they commit to**
Whoever states a commitment, an approval or a date signs it — and it reaches the others signed.
- 3 Everyone holds their proof**
What reaches you carries the signature of whoever stated it. That makes every copy as sound as the original.

Where your data lives. On your own machine, under your control. Each participating organization holds its own records. Exactly what you release is shared — and you can evidence that at any time.

Open and traceable

- Methods and formats are **published and documented**.
- For every entry you can see what it rests on: who stated it, when, and on what basis.
- Where two records contradict each other, **both sides are shown it**.

Sound for years

- Every commitment carries the **signature of whoever stated it** — with its time and its basis.
- Alter it afterwards and the signature shows it.
- The check runs **on your own machine**, offline, and still works years later.
